

SANDY VOSK

Founder and CEO of Advantage Technology Solutions

Sandy Vosk founded ATS in 2003 to help companies find innovative strategic solutions to their supply chain technology challenges.

As the son of a truck driver and a bank branch manager, Sandy was literally born into the supply chain industry. So, it's no accident that the values and life lessons Sandy learned watching his parents perform their jobs – putting the customer first, delivering exceptional results, and honoring each and every commitment – have become the enduring, unbreakable links in Sandy's 40+ year career as the ultimate supply-chain professional.

Sandy began his career on the corporate side at PepsiCo, TNT Express Worldwide, Philips Electronics and Mutual of New York (MONY), where he consistently led major, strategic digital transformation projects with consistent success.

Since starting ATS, Sandy has combined his corporate experience with his unique ability to **balance people, process and technology to help his clients achieve unparalleled strategic business results and customer satisfaction**. His ability to partner with any client or team on any project – large or small – has earned Sandy a reputation across the supply chain industry as an exceptional strategic partner, problem solver and thought leader.

Many clients hire Sandy for advice in keeping up with the demands of eCommerce and modernizing their operations while others want the ATS team to support their selection and implementation of a new Warehouse Management System (WMS) and/or an Enterprise Resource Planning system (ERP).

Sandy is a highly-sought speaker, panelist and contributor at industry conferences and is very committed to “giving back” to the industry and the community. He is President of the NY/NJ Roundtable of the Council of Supply Chain Management Professionals (CSCMP) and serves on the Board of the Urban Assembly School for Global Commerce (UASGC), helping HS students find opportunities for economic advancement through access to college and careers in the supply chain industry.
