

# CSCRL FALL FORUM

INNOVATING FOR THE FUTURE: THE ROLE OF TECHNOLOGY IN THE  
SUPPLY CHAIN

NOVEMBER 7-8, 2024

ABSTRACT

---

## HEALTHCARE INFORMATION TECHNOLOGY: ARE WE THERE YET?

DONALD LEVICK

PHYSICIAN AND FORMER CHIEF MEDICAL INFORMATION OFFICER  
LEHIGH VALLEY HEALTH NETWORK

---

Healthcare IT has come a long way in the past fifteen years. The Institute of Medicine (IOM) report *To Err Is Human: Building a Safer Health System* was released in 1999 and triggered a transition of healthcare delivery from predominately paper to digital formats. Technologies such as electronic health records, electronic health information exchange, telemedicine, modern supply chain systems, AI and the Internet of Things have transformed how healthcare is delivered, measured and reimbursed. This session will highlight several of these areas and discuss their current maturity level, accomplishments and ongoing challenges.
