ABSTRACT

TRANSFORMING SUPPLY CHAIN EFFICIENCY THROUGH USING AI COMPUTER VISION TODAY

PETER EDLUND

VICE PRESIDENT OF BUSINESS DEVELOPMENT

RAINSCALES

This presentation explores how AI-powered computer vision is revolutionizing supply chain operations. By automating quality control, inventory management, worker safety and logistics monitoring, computer vision systems are enabling faster, more accurate decision-making and reducing operational inefficiencies.

Attendees will learn about real-world applications, the integration challenges, and the future potential of these technologies in creating more resilient, responsive supply chains.
